

Mission:

At Dogra Technologies, our goal is to inspire our employees and partners to do best work of their lives, by building/testing essential applications for a wide range of industries. We continually refine and test our approach to creating software, and invest in ideas and teams that we believe in and can serve effectively.

Dogra Technologies: Open Source Technology Portfolio

What make Open Source the motto today? It's powerful, built-in functionalities that make it easier to create robust and highly scalable websites and manage multiple web pages, simultaneously. Open Source platform is free, enabling lucrative website development.

Dogra Technologies is a highly focused group of senior industry professionals with a passion to offer technology solutions based on open source technologies for helping address dynamically changing business challenges. We are driven by the passion to deploy efficient technology solutions and help our clients to improve their ability to grow rapidly, while lowering the operating cost, thereby improving the bottom-line.

A Dogra Technologies Perspective:

Right beginning for its inception, Dogra Technologies is pragmatic about using open source and cloud technologies to solve critical business challenges. Open source is the platform of choice for digital interactive agencies around the world servicing well known brands, web startups, ecommerce and rich content driven sites and blogs.

We are pragmatic about using open source and cloud technologies to solve critical business challenges. We are driven by the passion to deploy efficient technology solutions and help our clients to improve their ability to grow rapidly, while lowering the operating cost, thereby improving the bottom-line.

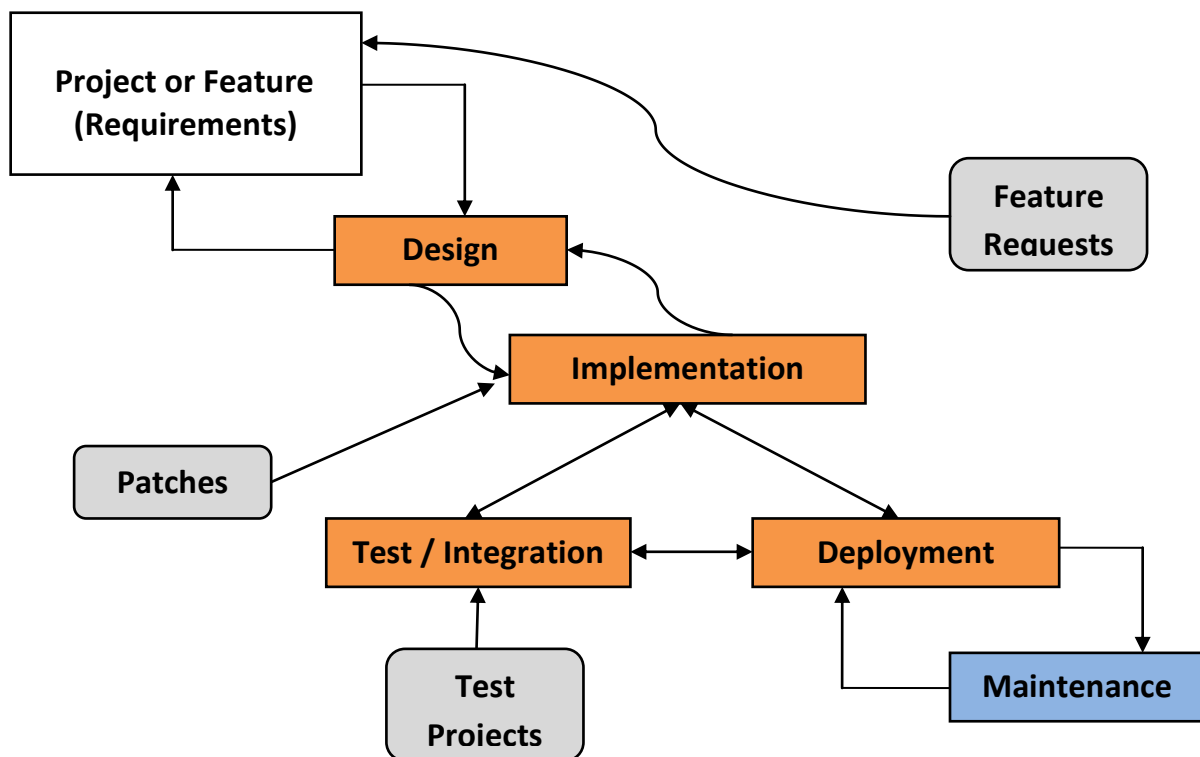

Customizing Open Source development applications innovatively for wide solutions by customers has been the focus of Dogra Technologies's software competency group in the recent years. The ability to integrate Open Source with proprietary and legacy technologies sets our Open Source experts apart from other system integrators, enabling organizations with a traditional IT models to take advantage of the flexibility and cost-savings of an open IT environment.

Benefits of using open source software:

- Cost savings typically range from 70% to 90% compared to a product developed from scratch, depending on the complexity of customization
- Reduced Development cost and Development time by about 40%
- Software comes with rights to modify
- Complete flexibility for meeting specific needs (not available with proprietary software)
- Enhanced portability
- Vendor neutrality
- Availability of quick fixes and feature enhancements
- Availability of large pool of talented developers at short notice
- Custom development and website integration, module features and different functionalities to improve the performance of your website and applications
- Often requires more than one open source software development application to be integrated and customized
- No definitive source for obtaining the required technical support.

Open Source Development Model:
